For further questions, please contact our technical sales support.

For information on oil specifications please refer to our general catalogue.

Food Packaging

Application examples

Food Packaging

Vacuum packaging evacuates air from the package prior to sealing. The intent is (usually) to remove oxygen from the container to extend the shelf life of foods and, with flexible package forms, to reduce the volume of the contents and package. By reducing the oxygen residual contents, the growth of aerobic bacteria is limited and the shelf life can typically be extended by a factor of 5 to 10.

Additionally, vacuum packaging prevents evaporation of volatile components, protects flavor and texture, and reduces freezer burn by protecting the food from the dry cold air.

Different processes / technologies are commonly used:

Chamber Machines

Chamber packaging machine can be single or double types, with or without belt conveyor. Resulting product is a skin packaged food. These machines are working in cycles from atmosphere pressure to 1 mbar (29.9" HG) every 0.5 to 2 minutes.

Typical pumping system

Single stage rotary vanes pumps or dry pumps, often with Roots blower if main vacuum pump is remote from the machine.

Modified Atmosphere Packaging (MAP)

MAP packs are produced by evacuation and gas flushing. The protective atmosphere inside the pack depends on the specific requirements of the product.

A combination of the following gases is very often used:

- Oxygen (O_2) which in high concentration, keeps an appetizing food colour
- Nitrogen (N_2) mainly used as a stabilizing gas to maintain the pack volume, e.g. for protection during handling or as transportation packaging
- Carbon dioxide (CO_2) which reacts with water to form carbonic acid and helps to lower the pH. This atmosphere inhibits the growth of microorganisms

Typical pumping system

Single stage rotary vane pumps or dry screw pumps in combination with Roots blowers. Oxygen reinjection is typically used for red meat packaging to enhance the red color.

Specific vacuum pumps, free of hydrocarbons, with inert oil and oxygen compatible seals might be required.

Thermoforming / Rollstock / Traysealing

This process allows for packaging continuously all types of food products between two plastic films reels or into pre-formed trays. The lower film is heated and forms the container.

The upper film is positioned above the thermoformed containers and is then thermowelded to protect the product from ambient air. The product is therefore skin packaged or packaged in a modified atmosphere. In both cases, vacuum is necessary.

Typical pumping system

Central vacuum systems made of rotary vane pumps or dry pumps.

Food Processing

Application examples

Food Processing

Food processing includes all the transformation steps of raw ingredients into food, or of food into other forms. This processing typically takes clean, harvested crops or butchered animal products and uses these to produce attractive, marketable and often long shelf-life food products. Similar processes are used to produce animal feed.

Food processing covers a very wide range of applications where vacuum is often used for various properties.

Tumbling

Tumbling is used on meat, fish and seafood products to add or enhance flavor, taste, colour, weight, conservation, texture, etc.. By combination of vacuum, pressure, heat and mechanical effects (due to the rotation of the drum), tumblers can achieve de-frosting, marinating, curing, cooking and chilling operations. Typical tumbling process lasts from 3 to 24 hours.

Typical pumping system

Rotary vane pumps or dry screw type pumps.

Vacuum cutting

Vacuum cutting is mainly used in meat processing industries (sausages makers). It provides a firm emulsion free of air and reduces the volume by 5-7% at constant weight. This saves packaging costs and less casings are needed. It better the texture, improves hygiene, reduces product oxidation but also allows to get a more effective absorbing and seasoning.

Typical pumping system

Small rotary vane pumps.

Slaughterhouse applications

In many plants, vacuum is used to convey specified risks materials and other sub-products from the slaughtering line to storage tanks for further use in rendering or before destruction.

Vacuum is also used to extract the spinal cord from cattle before carcass splitting (measure implemented after the mad cow crisis for the prevention, control and eradication of BSE on cattle aged twelve months or more).

Typical pumping system

Rotary vane pumps with improved water vapor capacity or dry screw type pumps.

Vacuum cooling

Compared to traditional cooling solutions, vacuum cooling allows a quicker cooling down of vegetables after harvest. Vacuum cooling is particularly suited for leafy vegetables (such as lettuce, endives, spiro) because they offer a high surface/volume ratio.

Nevertheless all vegetables (beans, berries...) can be processed.

The main advantages of vacuum cooling processes are:

- Low energy consumption
- Fast refrigeration time
- Refrigeration “to the heart”
- Significant increase in shelf life

Typical pumping system

Rotary vane pumps or dry screw type pumps in combination with Roots blowers.

Freeze drying

Freeze-drying, also known as lyophilisation, is a dehydration process typically used to preserve a perishable material or make the material more convenient for transport. Freeze-drying works by freezing the material and then reducing the surrounding pressure to allow the frozen water in the material to sublimate directly from the solid phase to the gas phase.

Freeze drying main advantages:

- Freeze dried products can be stored at ambient temperature
- Less damage to the substance than other dehydration methods using higher temperatures : in particular color and shape
- Does not usually cause shrinkage of the material atng dried (no volume reduction)
- Frozen products can be carried out all year long (no seasonal effect)

Typical pumping system

Rotary vane pumps or dry screw type pumps in combination with Roots blowers.

Proven Vacuum Technology for Food and Packaging Applications

SOGEVAC SV 10 FP to SV 300 FP

SOGEVAC FP range

Advantages to the User

- High pumping speed / footprint ratio by compact design
- Lowest cost of ownership by easy maintenance and minimized after sales costs
- Maximum tightness and low complexity thanks to integrated functions and no external pipes
- Lowest noise level on the market
- Wide range of motors available for all pump sizes
- Complete pump range from 10 m³/h to 300 m³/h
- Based on proven SOGEVAC design with manual gas ballast and oil filter

Typical Applications

- Thermoformers / Rollstock machines
- Chamber packaging machines
- Modified Atmosphere Packaging (except with O₂)
- Rotary chamber packaging
- Blenders
- Stuffers
- Vacuum cutters
- Freeze drying
- Vacuum cooling

Options

- Oils: LEYBONOL LVO 140 and LEYBONOL LVO 150 food grade oil (to be ordered separately)

After Sales Services

- Worldwide sales and service network
- On-site service and repair
- Tailor-made service contracts
- Replacement and back-up pool
- Vacuum expertise and consulting

In line tray sealing machine O²6000.

SOGEVAC SV 470 B and SV 570 B

SOGEVAC SV 570 B with air cooling (SV 470 B similar)

Advantages to the User

- Very low rotational speed increases the lifetime of the pump and leads to noise level reduction
- Extremely low noise level in any working conditions
- Reduced number of oil pipes
- Reduced operational costs
- Long lifetime of oil and exhaust filters
- Simplified maintenance thanks to an easy access to all key components
- Small footprint
- Air or water-cooling and many motors and options available
- Competitive price-to-performance ratio
- Adaptors for direct mounting of Roots blowers

Typical Applications

- Big thermoforming and chamber packaging machines
- Freeze drying
- Vacuum cooling
- Central vacuum systems for packaging and processing

- Wide range of pump monitoring sensors available

Typical Applications

- Big thermoforming and chamber packaging machines
- Freeze drying
- Vacuum cooling
- Central vacuum systems for packaging and processing

SOGEVAC Hydro Range

for applications with large water vapor load

SOGEVAC SV 25 B to SV 1200

SOGEVAC SV 40 B HYDRO

In some of the food processing applications, water vapor and moistures are present in high quantity. Tumbling process or slaughterhouse applications (like carcasses cleaning) are some examples.

For this purpose, Oerlikon Leybold Vacuum is offering the SOGEVAC range with improved water vapor capacity.

Pump Features

- Big gas ballast or two gas ballasts to increase pump water vapor tolerance
- No oil filter or oil filter by-pass to avoid early clogging
- Stronger motor (on some sizes) to handle high working pressure

Spinal Cord Vacuum System for sheep and lamb equipped with SV65B HYDRO.

SOGEVAC Oxygen Range

for applications with Oxygen enriched gases (> 21 Vol.%)

SOGEVAC SV 25 B to SV 750 B

SOGEVAC SV 100 B

Typical Applications

As soon as oxygen is being pumped at concentrations exceeding 21% (atmospheric air) the SOGEVAC pump needs to be prepared especially for such operation.

This is typically the case in red meat Modified Atmosphere Packaging processes (MAP).

Safety Precautions

As standard, the pumps are equipped with FPM (FKM) seals and an oil filter bypass. Before assembly, all parts are degreased and the pumps are tested with PFPE lubricant.

Thereafter the pumps are emptied and delivered without PFPE lubricant.

The pumps are supplied with special Operating Instructions (GA), Spare Parts List (ET) and include a CE declaration.

This special information must be observed.

Due to the use of PFPE lubricant (LVO 400) and grease the maintenance schedule has also been changed accordingly.

Only degreased accessories (filters and valves) and original spare parts from Oerlikon Leybold Vacuum must be used.

Product Selection

SOGEVAC pumps of the following sizes are available:

SV 16, SV 25, SV 65 B, SV 100 B, SV 200, SV 300 B, SV 470 B, SV 630 B (F) and SV 750 B.

The use of PFPE lubricant (LVO 400) will also impair the attainable ultimate pressure depending on the size of the pump.

Local safety regulations (handling of O₂ and PFPE (LVO 400) must be observed!

Advantages to the User

- Suitable for packaging under modified atmosphere (M.A.P.)
- Hydrocarbon-free pump parts and inert PFPE oil filling for use in oxygen applications, respective when gas mixtures are pumped with O₂ concentrations exceeding 21%, available upon request
- High pumping speed down to ultimate pressure
- Operation of the pump at all pressures between 1000 mbar (750 Torr) and ultimate pressure is possible
- Integrated and effective separation of oil mist
- Compact design
- Air or water cooled
- Environment friendly (low noise, low heat radiation and low vibrations)
- Available in many different variants, motor voltages, ports etc.

RUVAC WAU 251 to 2001 FP

RUVAC WAU 2001 FP Roots vacuum pump, depicted with a DN 160 ISO-K collar flange

Advantages to the User

- Air-cooled line WAU FP with four blower sizes
- Motors of efficiency class IE 2
- Reliable and trouble-free
- Sealing rings with their housing can be easily replaced
- Shaft seals and elastomer seals made of FPM (FKM)/Viton
- Easy installation, direct coupling without a support frame for SOGEVAC SV 100 FP models or larger
- The combination of RUVAC Roots blowers with SOGEVAC forevacuum pumps features:
 - increased pumping speed
 - improved ultimate pressure
 - shortened cycle times
- Easy to exchange with custom motors
- Integrated pressure equalization line for protection against overloading at high pressures
- Conversion from vertical to horizontal flow
- Maintenance-friendly
- Excellent lifetime and robustness

Typical Applications

- Large capacity chamber packaging machines
- Vacuum cooling of fruits and vegetables
- Freeze drying

Supplied Equipment

- RUVAC WAU FP are supplied as standard for a vertical flow, horizontal flow upon request
- Mineral oil LVO 100 is used as standard
- Gasket in the intake flange with dirt sieve
- The required lubricant filling is included in separate bottles

Optional Equipment

- Wash-down duty motors
- Food grade paints
- Oil dipstick in lieu of oiler cup
- Base frame with hose barb connections

LEYVAC, DRYVAC and SCREWLINE

Your Expectations

- Oil-free compression
- Maximum levels of food safety and performance
- Absolutely no risk of oil coming in contact with food
- No oil emission at exhaust
- No oil smell in operation room
- No costly oil and filter disposal
- Long system uptimes, minimized maintenance
- Lowest cost of ownership
- Eco-friendly pump
- Short cycle times and high process throughputs

Twin-piston filling system OPTI serial.

LEYVAC

Advantages to the User

Rugged vacuum pumps for rough applications and high process throughputs.

Simple vacuum performance upgrade with RUVAC Roots pumps.

Typical Applications

- Freeze drying
- Thermoforming
- Modified Atmosphere Packaging
- Vacuum cooling

Our Solution

- Pumping speed 80 to 300 m³/h
- Ultimate pressure $\leq 1 \times 10^{-2}$ mbar
- Hermetically sealed pump
- Low noise operation, low heat loss
- Direct connection of RUVAC Roots blowers via adapter

DRYVAC

DRYVAC DV 650

Advantages to the User

Rugged, dry compact vacuum solutions with smart monitoring and control system for Food and Packaging applications.

Typical Applications

- Freeze drying
- Thermoforming
- Modified Atmosphere Packaging
- Vacuum cooling

Our Solution

- Pumping speed from 450 to 1,200 m³/h
- Ultimate pressure $\leq 5 \times 10^{-4}$ mbar
- Rugged design
- Highest energy efficiency
- Flexible modular system for compact vertical and horizontal installation
- Integrated frequency converter for optimal process control
- Smart monitoring of major parameters
- Direct connection of RUVAC Roots blower via adapter

SCREWLINE

Advantages to the User

Extremely robust for harshest Food and Packaging applications, simple on-site maintenance.

Typical Applications

- Freeze drying
- Tumbling
- SRM and by-products conveying
- Thermoforming
- Modified Atmosphere Packaging
- Vacuum cooling

Our Solution

- Pumping speed 250 and 630 m³/h
- Ultimate pressure $\leq 1 \times 10^{-2}$ mbar
- Designed for demanding processes
- Easy to clean
- Air cooled
- Monitoring system
- Easy to disassemble pump chamber for rapid cleaning
- Direct connection of RUVAC Roots pumps via adapter

Side Channel Blowers

Side channel blower

Operating principle

Side channel blowers can generate high pressure increments to the processed fluid gas. Therefore they can be used for compression or creating a vacuum.

The blowers consist of an impeller and a casing in which a peripheral toroidal channel is housed. During operation, the impeller operates without contact with the surrounding parts, eliminating all lubrication-related issues and/or wear.

Advantages to the User

- No wearing parts
- Maintenance free operation
- No pulsations in the conveyed gas
- Extremely modular and easy to install

Further technical details, performance curves and accessories program available on demand.

Technical features

- Integral motor design versions
- Impellers made of aluminium alloy and dynamically balanced
- MS product range = Single impeller single stage
- MD product range = Single impeller double stage

Typical Applications

- Vacuum conveying
- Pick and place
- MAP Packaging
- Filling machine
- Thermoforming

Vacuum conveying system designed to customer specifications, including control and piping

Liquid Separator, see-through

See-through liquid separator with insert for the collection of large particles

Dimensional drawing of the liquid separators.
For the dimensions please refer to the technical data

Operating principle

- Inlet air with potentially harmful liquid and large particulate enters the housing and is separated by a baffling mechanism and directional air flow changes. The larger particles and liquid drops down and collects at the bottom of the separator
- A float ball within the separator screen rises with the liquid level until max capacity and cuts off the flow thereby protecting the pump from damage.

Advantages to the User

- Prohibit liquid and debris from damaging vacuum valves and pumps
- Easy visual inspection with see-through housing
- Minimize piping costs with "T" style configuration
- Compact design for space restricted work areas

Technical features

- High impact, shatter resistant, polycarbonate bucket
- Corrosion resistant cast aluminum head with integrated knockout baffle
- Stainless steel float ball for emergency shut off
- 1/2" drain
- 1/4" differential gauge ports 2" to 4"

Technical Data

Dust Filter, see-through

See-through dust filter with insert for the collection of large particles

Dimensional drawing of the dust filters.
For the dimensions please refer to the technical data

Operating principle

- Inlet vacuum filter with exchangeable polyester cartridge (efficiency on 5 microns particles > 99%)
- Transparent and removable housing in polycarbonate material allows monitoring visually clogging state
- Simple cleaning and fast filter insert exchange

Advantages to the User

- Prohibit liquid and debris from damaging vacuum valves and pumps
- Easy visual inspection with see-through housing (transparent)
- Minimize piping costs with "T" style configuration
- Compact design for space restricted work areas

Technical features

- See-through bucket made from polycarbonate material with high tensile strength for dimensional stability
- Cast, corrosion resistant aluminum top with machined connections with integrated baffle design
- Operating temperature range:
 - Dust filter: max. 104°C (220°F)
 - Bucket: max. 125°C (257°F)
- Inlet / Outlet: G1"1/4 to G4" – depending on the size
- Large collecting bucket
- G1/4" differential gauge ports

Technical Data

		Dust filter

Dust Filter (Intake side)

SOGEVAC SV 40 mit montiertem Staubfilter F 40 und verschiedenen Filtereinsätzen

The filters consist of a steel housing and a lid with three quick locking clips.

Advantages to the User

- Same housing for different cartridges
- High separation capacity
- Quickly exchangeable cartridge

Polyester Filter Cartridge

- Separation of particles down to 5 µm (moist process: dust, powders, chips etc.)

Metal Filter Cartridge

- 0.08 mm (0.003 in.) mesh
- Collects solid particles down to 0.08 mm (0.003 in.), like plastics, paper, packaging materials, food-stuffs

Dimensional drawing for the dust filters F 16-25 to F 1200

Technical Notes

We recommend installing the filters horizontally on a 90° bend. This will prevent separated particles from falling into the intake line when disassembling the filter.

Technical Data

Vacuum Pressure Gauges

DIAVAC 1000 Vakuummeter

The DIAVAC DV 1000 is a rugged mechanical diaphragm vacuum gauge with high measurement accuracy for pressure measurements in the rough vacuum range from 1000 to 1 mbar.

Advantages to the User

- Großer Messbereich 1 to 1000 mbar mit hoher Auflösung im Bereich 1 to 100 mbar
- Hervorragende Medienverträglichkeit durch Edelstahl-Membran
- Leichte Reinigung des Messraums durch abnehmbaren Messflansch

Typical Applications

- Drying processes
- Vacuum distillation
- Absolute pressure measurements for gas mixtures

Technical features

- Vacuum connection: DN 40 KF
- Individual scale calibration
- Absolute pressure gauge
- Readout is independent of gas type and changes in atmospheric pressure
- High precision diaphragm
- Rugged table-top housing with flexible installation opportunities: flange connection or panel mounting possible
- Dimensions (W x H x D): 180 x 166 x 100 mm

THERMOVAC TM 101

Digital handheld Piezo/Pirani combination gauge with data logger.

Typical Applications

- Food and packaging industry
- Vacuum process quality assurance

Advantages to the User

The temperature compensated handheld THERMOVAC TM 101 is equipped with a Piezo/Pirani combination sensor and capable for total pressure measurement in the range of 1200 to $5 \cdot 10^{-4}$ mbar.

The instrument can also be operated completely under vacuum conditions. The pressure is displayed continuously over the whole measurement range.

With the integrated memory-function it is possible to store and display up to 2000 measured values.

Technical features

- Measurement range 1200 to $5 \cdot 10^{-4}$ mbar (7 decades)
- Usage possible directly in a vacuum
- Data logging via USB interface and internal memory for up to 2000 measured values
- Online measurement via USB possible; measuring data exportable
- Cordless power supply with standard 9 V battery or 12 V AC adapter
- Pressure unit selectable amongst mbar, Torr and Pascal
- Windows software VacuGraph for measuring data storage and PC analysis (optional)

Modular vacuum systems with SOGEVAC rotary vane pumps for varying vacuum demands

Central Vacuum Stations

CVS

Advantages to the User

- Precise adjustment of the vacuum production to the demand resulting in minimized energy consumption
- Highly reliable redundant system design with automatic pump changeover in case of failure
- No more risk of oil emission in the production area

Typical Applications

- Thermoforming
- Tray sealing
- Modified Atmosphere Packaging (with and without oxygen)
- Tumbling
- Vacuum conveying

Your Expectations

- Reduction of electrical consumption up to 30%
- No unpredicted production stop due to vacuum pump breakdown
- Decrease of the maintenance costs and cost of ownership
- Improvement of the production sanitary conditions
- Enhancement of the operators working environment

Our Solution

- Central vacuum systems consisting of:
 - oil sealed rotary vanes / dry screw pumps / roots blowers combination
 - buffer vessel
 - electrical cabinet with PLC controller
 - filtering and connecting components
- Standard catalogue products or tailor made / customized solution
- Delivery of turnkey ready-to-operate and tested units
- Basic functions:
 - Automatic switch On / Off of the pumps according to vacuum need
 - Easy and flexible pressure thresholds adjustment
 - Automatic changeover of pumps for even distribution of running hours
- Pump monitoring to optimize maintenance intervals

Leybold Vacuum Services - all from a single Source

Fast, competent and reliable.

Our Global Support for You

We endeavour to be of assistance to you quickly when requiring service for your vacuum equipment.

Oerlikon Leybold Vacuum has an extensive after sales service network at our disposal.

Our fully-trained and certified engineers are well prepared to repair and service your vacuum equipment. Benefit from the largest service network in the entire vacuum industry.

We are always close-by!

Our Performance

- Global Sales and Service network
- Factory overhaul of your vacuum components in one of our local service centers
- Preventive maintenance
- On-site service by our field service
- Tailor-made service contracts
- Extended warranty programs
- Exchange and back-up pool
- Remote maintenance
- Calibration of your measuring systems
- Installation and operator trainings
- Expertise and application consulting in all matters of vacuum technology
- Multi brand repairs on request
